

## Diode Lasers

The expected lifetime of a Duroline laser is more than 5 years, which with normal use makes them a cost effective choice. Both Emerald and Ruby are easy to install, with built-in adjustments for horizontal and vertical. The Duroline lasers offer immediate start-up with no need for warm-up time, so that the system can be used immediately when it is switched on.

### Ruby

Ruby, Duroline laser is a **red** diode laser. With a wavelength of 635 nm it offers a very good visibility and a sharp beam.

Ruby-1 is a single line laser and the Ruby-2 is a cross line laser.

### Emerald

Emerald, Duroline laser is a **green** diode laser. Emerald has a green light which is much easier to see.
